

Cellulite and  
body skin tightening  
with VelaShape™  
and Endermology

## Cellulite and body skin tightening with VelaShape™

VelaShape™ has been brought into the aesthetics industry to tighten, lift and tone the body without resorting to surgery. VelaShape™ is a fast and safe way to improve cellulite and reshape the body through circumferential reduction.

### How does VelaShape™ work?

VelaShape™ is one of the new non-surgical and non-invasive medical solutions to have proven results. The concept behind the treatment is called “elos”. This is a combination of energies that reduce the volume of the tissue and improve the appearance of the skin. This is achieved by heating the fatty tissues in the problem areas.

VelaShape™ uses vacuum and tissue manipulation to even out the skin, breaking apart the groups of fat cells and targeting the fat tissues. It encourages a chemical reaction that takes place in the deeper layers, making the fat easier to metabolize, which helps to shrink the fat and reveal a smooth and tighter figure.

## The Treatment

Before the treatment takes place the client will have a full consultation with the clinician, who will discuss what is to be expected and go over any worries or concerns that they have.

The treatment involves being assessed, weighed and measured. Pictures will be taken at the first treatment, to analyse and record the problem areas. The client will then be made comfortable on the couch and the treatment will start.

The clinician will apply a lubricating spray which helps the machine’s hand piece to glide over the problem areas. The machine’s hand piece will be worked over the area being treated until the surface and deeper layers are warm. Each area will be worked on until the clinician is happy. The area will then be wiped clean and the treatment is then complete.

### What areas can be treated by using VelaShape™?

- Thighs
- Buttocks
- Stomach
- Arms

### What should be expected from VelaShape™?

From the first treatment clients should see an improvement in the skin and the treated area. It should feel tighter, smoother and firmer. Results in cellulite reduction or body reshaping should be visible 6 – 8 weeks post final treatment session. Maintenance treatments are usually recommended every 1 - 3 months to maintain optimum results.

From the first treatment clients should see an improvement in the skin and the treated area. It should feel tighter, smoother and firmer.

Areas that can be treated are the inner and outer thigh, buttocks, stomach, arms and bra strap lines.

As with VelaShape™, clients will have a full consultation and are weighed and measured prior to the treatment commencing.

Either treatment is very effective for the reduction of cellulite and your clinician will advise you on the best course of treatment for you.

If you would like to know more about VelaShape™ and Endermology at Absolute Aesthetics, please look at the website: [www.absoluteaesthetics.co.uk](http://www.absoluteaesthetics.co.uk) or contact us on: [info@absoluteaesthetics.co.uk](mailto:info@absoluteaesthetics.co.uk) or Tel: 01483 477 189

### Is the treatment safe?

The VelaShape™ treatment is a very safe procedure, although like any treatment there is always a small risk of complications. The clinician will discuss this with each client in their consultation and address any concerns or worries they might have.

### Endermology

Endermology is a non invasive technique for reducing the appearance of cellulite and helps to eliminate stubborn fat. The machine has a vacuum that creates a suction to mobilise and lift soft tissues and this helps to smooth out uneven skin caused by cellulite. Clients wear a body stocking during the treatment to prevent the rollers pinching the skin and to ensure the rollers move smoothly over the skin.
